Dual-Tone Siren Driver

SDM-100

SKU: 19769 UPC: 80020000

The SDM-100 Siren Driver is a compact, general purpose module for use where high dB sound output is required. The unique circuit design provides a high sound level output with a lower current requirement than comparable units. Careful design of the output stage results in a very low power loss which maximizes power to the speaker load and maintains a very low heat rise on the output stage for longer life of the solid-state components.
