## VDV II Voice, Data and Video Cable Verifier w/ Wiremap

ST-158000

SKU: 131141

Simply45ST-15800 VDV II Voice, Data and Video Cable Verifier with Wiremap. Kit includes 1 x VDV II, 1 x dual port remote unit, 1 x coax remote unit, 1 x alkaline battery, 1 x multi-language user guide. It is an easy-to-use cable tester that checks the integrity of copper cables found in voice, data, or video installations thanks to its various connectors and intelligent interface. A 6-pin RJ-11/RJ-12 port, an RJ45 port, and a Coax F-type port on the VDV II allow you to connect and verify copper cables typically found in domestic, commercial, or industrial applications.

The VDV II can subsequently measure the cable's length and display it on the backlit screen. An analog tone generator helps identify signals or cross-connections within the cabling. Wiremap technology determines where there might be damage to the cable with miswires, shorts, or opens. The included remote unit or dual-port remote unit can be embedded into the bottom of the device for easy storage and portability. The VDV II is powered by an included 9V alkaline battery.

### Features

RJ-11, RJ-12, RJ45, Coax F-Type Verifies Voice, Data, and Video Cables Measures Cable Length and Signal Wiremap for Miswires, Shorts, Opens Backlit Display, Remote Unit
