Full Message LCD Hardwired Keypad w/Built-in PowerG Transceiver

HS2LCDRF9ENG N

SKU: 19720 UPC: 80007835

PowerSeries Neo keypads have quite a few features that make them a great add-on to your Neo burglary detection system. Some of these features include five programmable keys for instant one-button activation of important Neo system functions. The keypads also feature a quick exit feature that alleviates the need for the user to disarm and then rearm the system whenever they leave the building.

The HS2LCDRF9ENG full message keypad is the newest in alpha-numeric readout keypads for the DSC Neo burglary systems. These keypads are what we recommend for a primary keypad because of the ability of this keypad to read out alpha and numeric characters on the screen. Because of this keypad's ENG designation it will have English words on the function buttons instead of icons. Since the programming of a DSC system is in alpha-numeric characters; this keypad will make your programming job ten times easier than using one of the ICN keypads to program with. This LCD keypad features a built-in wireless receiver that is used to receive transmissions from DSC's new Power G wireless devices. If you can't wire anything else to the system then you can use this to add more devices.

Features
