1-Channel Multi-Code Receiver Module

109020

SKU: 66412 UPC: 93863105616

The Model 109020 1-Channel Receiver is designed for use in residential garage door operator applications. Typically the receiver mounts directly to the three terminals on the door operator. An 11-inch wire antenna extends from the receiver.

The operator supplies 24-volt power to the receiver, or the receiver can be powered by a separate 24-volt AC power transformer. Remote power accessories available for the Model 109020 include the Model 109201 Wiring Harness and the Model 109207 Wiring Harness. Both models include a plug-in transformer.

The receiver's exclusive two-way terminal lugs fit under terminal screws or can be used with push-on terminals in remote placement applications using the Model 109206 3-Wire Adapter.

The receiver is programmed with a 10-position coding switch. When a Multi-Code transmitter set to the same code is activated, the receiver's output will activate, triggering the door operator.

Features

- 1-Channel Multi-Code Receiver Module
- Designed for residential garage doors
- Mounts directly to door operator terminals
- Operates at 300 MHz frequency
- Powered by 24V from operator or transformer
- Includes 11" wire antenna
- Compatible with Model 109201 and 109207 harnesses
- Features 10-position coding switch
- Activates with matching Multi-Code transmitter
