Stops Noise Problems at the Source

Unwanted noise produced by vibrating sheet metal is a common problem in every household. Dishwashers, air conditioners, duct work and piping create irritating noise problems that keep you from enjoying music, movies and everyday family life. All these items are made from sheet metal and can be made quiet with an application of Dynamat.

Dynamat Xtreme is a very thin, light-weight, constrained-layer vibration damper. Dynamat Xtreme has a self adhesive peel and stick backing with a high level of tack that conforms and fuses easily to sheet metal and any other hard substrate.

Sheet metal subjected to impact creates noise. With Dynamat installed, the noise is transformed into silent energy through a process called Vibro-Acoustic Energy Conversion. Dynamat converts the vibration energy into low-grade thermal energy. The result is a more quiet and comfortable living environment.

Utility Pak 6.6 sq.ft. 24 shts - 1/16" thick x 4" x 10" ea.
