

## 18Gbps HDMI-Over-HDBaseT Receiver

RXV-70-4K-G2

SKU: 25157    UPC: 814303000000

### **18Gbps HDMI-Over-HDBaseT Receiver (2160p 4:4:4/60: 70m/230ft | 1080p: 100m/328ft) RXV-70-4K**

Consumer HDMI content is now breaking through the once comfortable HDBaseT 'ceiling' of 10Gbps, with HFR (High Frame Rate) HDR here already in the form of Blu-Ray, Satellite & Cable (HLG) and gaming content. WyreStorm's H2XC matrix platform is ready for this, with this receiver being the perfect match for the TX-H2X-VLC modular card, using our new light-compression transmission solution

#### **HDMI2.0 VIDEO: MAXED OUT!**

Always looking ahead, WyreStorm can handle both current & future video content technologies. The highest possible bandwidth that currently exists according to the HDMI 2.0 specification can still be sent using HDBaseT and the latest in lossless compression technology from the matrix to the RXV receiver.

The very core of WyreStorm transmission, we've embraced HDBaseT technology since 2010. We're now taking the capabilities of HDBaseT to the next level and supporting video bandwidths in excess of 10Gbps with our lossless compression technology built in to our H2X matrix platform. The RXV-70-4K will output HDMI content at up to 2160p 4:4:4/60.

#### **POWER-OVER-HDBASET**

With PoH available across all HDBaseT matrix outputs, the headache of hiding power supplies is one less thing to worry about. Power to drive the receiver is sent over the category cable along with the video, audio, control, and Ethernet, making installations neat, quick and easy as possible.

#### **SLIMLINE DESIGN**

As space between displays and the wall they™re mounted to reduces, finding a receiver to fit in this gap can be hard to find. But just because this receiver packs a punch doesn't mean it can't deliver the small footprint that you've come to expect. It also ships complete with all the accessories needed to help the integrator complete the install discreetly and efficiently.
