

10A Advanced Power Conditioner, 2 Outlets, SMP w/Auto Reset EVS, 3.3 Ft Cord

AC-215A

SKU: 26057 UPC: 654061028246

The Furman AC-215 2-Outlet Power Conditioner offers advanced and comprehensive transient voltage surge suppression. Furmans proprietary Linear Filtering Technology (LiFT) suppresses AC noise evenly, assuring maximum performance from your system. SMP circuitry offers the highest degree of protection against electrical surges and spikes, and does this without sacrificing itself or any of its components. In addition, the Extreme Voltage Shutdown circuit automatically turns off the unit when it is fed 135 volts or higher, protecting itself and connected equipment from the extreme voltage.

The AC-215 is a compact 2-outlet power conditioner, and its compact, streamlined design integrates easily into any system. Included are two brackets which allow you to mount it inconspicuously behind a projector, LCD or plasma screen, inside of a rack, on a wall or a ceiling, or any other location where discrete power conditioning is needed.

Features:

- Series Multi-Stage Protection (SMP) with a high current TVZ-MOV provides the highest level of AC surge suppression
- Automatic Extreme Voltage Shutdown (EVS) guards your valuable equipment from dangerous wiring faults
- Zero ground contamination circuitry assures the delivery of pure AC power thus protecting critical audio/video components
- The master switch controls all outlets and glows red when the power is on
- Compact chassis design
