

HDBaseT 4K UHD Receiver

RX-70-POH

SKU: 20589

RX-70-POH HDBaseT 4K UHD Receiver with Bidirectional IR, RS-232 and PoH (4K: 35m/115ft | 1080p: 70m/230ft)

As slim as it is powerful, the RX-70-POH HDBaseT Display Receiver receives 4K transmissions up to 35m/114ft and full 1080p@60Hz/36bit up to 70m/230ft, with multichannel audio, bidirectional IR control, RS-232 and remote power from WyreStorm PoH matrices, transmitters or presentation switchers along a single Cat5e/6 cable all within a low-profile chassis capable of placement behind even the slimmest display wall mounts.

CLASS B HDBASET

Small in size but not in specification, the RX-70-POH is no different to the modern H2 family of products, supporting pixel-perfect 4K UHD 4:2:0 10-bit @24Hz at distances up to 35m/115ft or 1080p to 70m/230ft.

CONTROL OPTIONS

Supports 3 methods of control pass-through. Being a pure HDBaseT device, the RX-70-4K can handle bi-directional IR, RS-232 and even CEC routing when used as part of a compatible WyreStorm matrix or extender system.

POH

The RX-70-POH can be powered by a PoH compatible matrix or presentation switcher meaning one less thing to think about when specifying & installing a WyreStorm system.

FULLY COMPLIANT WITH HDCP 2.2 ENCRYPTION

As with all of our HDBaseT Receivers, remaining relevant & legal is key to their operation. The RX-70-POH is compliant with the strict anti-piracy algorithms that prevent the unauthorized distribution of content, meaning a trouble-free installation
