Base Model Video Security Assistant - Black

MRB10B-P2-E2-A5-F2

SKU: 113284   UPC: 5298000000000

See What Matters, Ignore What Doesn't

Monitoreal AI Video security assistant uses advanced object detection to deliver real-time alerts, by connecting to IP surveillance cameras - making existing or new surveillance systems smarter. Customizable rules, deliver highly accurate alerts and offer users more control over how they view, manage, connect, and respond to events around their home or business.

Features

- **Highly Accurate:** Great object detection accuracy, without the constant false alarms typical in other systems.
- **100% Private:** All detections and alerts are generated from behind the user's firewall.
- **Most Cameras Supported:** Works with most cameras via ONVIF or RTSP; along with select analog hybrid recorders.
- **No Monthly Fees:** No recurring fees and no upgrade fees to use full features.
- **Constantly Improves:** Security updates, privacy improvements, and new features are included at no cost.

Complete your solution offering - take advantage of a growing market need

Unlike most "smart" devices that typically go direct to consumer and offer motion-based detection with increased false alerts, the Monitoreal device is a channel friendly solution which allows integrator partners to deliver a complementary product that increases PO size, value, and profitability with existing and new installs.

- Monitoreal represents a new way for Integrator partners to differentiate themselves in the market and offers a way to:
- Avoid being displaced by inexpensive, motion-based technology products.
- Monetize existing customer installs as an upgrade and up-sell new customers with AI computer vision analytics add-on.
- Integrate with VMS using Webhooks, when needed.
- Meet a growing need in small commercial and 'smart home' markets, with low labor installation cost and healthy margins.
- Compete against inferior DIY products.

Flexible Notification Settings - Always Alert!

Advanced object detection allows users to set notifications from 19+ objects from the categories of people, vehicles, animals, and accessories.
