

F-Type Female to RCA Plug Adapter

K2435

SKU: 2714

Karbon A/V F-Type Female to RCA Plug Adapter K2435.

Coax adapters are the perfect way to quickly change the gender or connector type on an already terminated cable. This nickel-plated coaxial adapter has an F-type female connector opposite an RCA female connector.

Features

- Connects and converts an F-type coax cable to an RCA input. Consists of one RCA female jack and one type-f female jack. Transmits composite audio/visual signals between two compliant devices.
- Supports a wide array of devices that are RCA/coax compliant, these devices include but are not limited to; AV receivers, amplifiers, digital HDTVs, monitors, and much more. Supports coaxial networks and telephony applications.
- It has an electrical impedance of 75 ohms. It possesses nickel-plated contacts that minimize signal loss as well as stabilizing signal transmission. It also provides resistance to corrosion.
- The installation process is relatively simple and quick to put together. Twist on your f-type male coax cable and your RCA male cable to the appropriate ports, connect each cable to your selected device to begin use.

Specifications: Connector A: F female Connector B: RCA female Brass body Silver plated adapter for converting "øF" type connectors on Coax cables into RCA Do not use these adapters to connect an RF antenna signal into a composite video signal or visa versa. When using this for composite signals, you should have an RCA adapter on both ends.
