

## Passive Infrared Door Sensor - Black

OP-08CBL

SKU: 112815    UPC: 788924000000

The OPTEX OP-08C passive infrared door sensor is a reliable and cost effective sensor for request-to-exit and security applications. The compact housing makes it also suitable for recessed mounting. The detection pattern of the OP-08C consists of 10 individual zones, providing high sensitivity even in large areas. Rotating the spherical lens easily changes the detection area from standard to large size. By using area masking seals, the detection pattern's size and shape can be further customized to best fit the application.

### Features

- Compact and Attractive Housing Design
- Ceiling Mounting
- Environmental and Artificial Disturbance Immunity
- Flexible Detection Area Setting
- Available in two colors: (Black / White)
