

24-Port Gigabit Desktop/Rackmount Switch With 24-Port PoE

TEG1124P-24-250W

SKU: 129706 UPC: 885397000000

In real projects, APs and cameras are often installed outdoors or at an elevated location, which increases the chance of lightning strikes on cameras and PoE-powered switches. The result is that individual devices are damaged when the outcome is light, and even the whole local area network is damaged. Tenda TEG11 series switches have professional lightning protection design - 6KV Lightning Protection for Ports and the power, and they have two levels of protection design respectively, which effectively suppress the lightning current from the network cable and power supply, equivalent to adding a security wall to the entire network monitoring system. The test standard is much higher than the national CCCrequest. In the thunderstorm, Tenda TEG11 series switches can also provide a stable and reliable service to the surveillance network and guarantee the normal transmission of the picture.

Features

- 6KV Port Lightning Protection
- Maximum PoE Output Power 225W
- Cache Optimization
- One-Key VLAN
- CCTV, Standard, VLAN and Isolation Operation Modes Offered
- 225W PoE power supply simplified wiring
