

## 2" Thick Broadway Panel Control Columns - Black

F102 2448 00

SKU: 156857    UPC: 676101000000

The F102-2448-00 2" Thick Broadway Panel Control Columns (Black) from Primacoustic is a set of high-density absorptive panels designed to provide an acoustic treatment where you want to control primary reflections, eliminate flutter echo, and reduce standing waves. A typical installation includes a series of these panels installed between the sound source and the listener, usually spread across a wall surface with space between each panel. This configuration allows energy to reflect back into the room to prevent deadening of the acoustic space and leaves a sense of balance and natural ambient acoustics.

The panels are easy to install on virtually any surface and feature a roman-pillar column-shaped design that is sure to match the aesthetic look of any environment. Its tall rectangular design makes it particularly well suited for installation in live-end and dead-end spaces, such as studios and home theaters. However, spreading multiple panels across a larger space, such as practice rooms or studios, can also be an economical choice for a larger installation.

### Features

- Acoustic Treatment
- Control Primary Reflections
- Eliminate Flutter Echo
- Reduce Standing Waves
- Roman-Pillar Column Design
- Easy Mounting on Any Surface
- Small or Large Installations
- High-Density Fiberglass
