

C-Series Basic Bluetooth

BTC-1X

SKU: 16540 UPC: 612935000000

The BTC-1X Bluetooth® module is a transceiver that lets you wirelessly connect a portable media player, smartphone, or other Bluetooth equipped device to any Russound MCA-Series controller.

It transmits balanced line audio to the XStream Bluetooth input. The BTC-1X also supports the aptX codec, providing enhanced audio quality that is far superior to standard Bluetooth audio.

The BTC-1X can be installed anywhere and can extend Bluetooth reception beyond the normal limits.

Like all Russound Local Source Modules, the BTC-1X can be set to automatically interrupt an active audio signal. It integrates easily with the MCA-Series controller via a dedicated CAT-5 connection. No other connection or power supply is required.

Features

- Installs via a single CAT-5e up to 300' (91.4m) away from the MCA-Series Controller
- Adds a Bluetooth streaming source connection
- Dramatically extends Bluetooth range up to 49'
- aptX® audio codec for enhanced sound quality
- Free custom naming software for easy identification when using more than one in a home
