Ultra Quiet Two-Fan Panel

UQFP-2

SKU: 12220   UPC: 65674707045

The UQFP-2 Ultra Quiet Two-Fan Panel from Middle Atlantic is a high-performance 2U fan designed to promote optimum airflow in your cabinet, thereby lowering the operating temperature of your equipment and extending its life. It has been designed for use in boardrooms, classrooms, offices, and other areas where quiet operation is essential.

A thermostat control will vary fan speed based on the temperature in your rack or enclosure, a feature that ensures a constant operating temperature regardless of changes to ambient temperature. Temperature is monitored via an onboard digital processor and an included temperature probe.

An over-temperature notification is another powerful management tool that will alert you locally or remotely through use of an external alarm device. Local status and alert messages are communicated through LED lights on the unit's front panel.

Features

- Using a fan in your rack to lower its temperature can extend the useful life of your equipment.
- This unit has been designed for use in boardrooms, classrooms, offices, and other areas where quiet operation is essential.
- Automatic Temperature Control
- Over-Temperature Alert
- 50 CFM
- 24 dB

Construction	16-gauge steel
Finish	Black powder coat
Size	x2 Fans in 2U rack panel designed for use with standard 19" racks
Noise Level	24 dB
Cubic Feet Per Minute	50 CFM
Speed Control	Automatic
Power Requirements	12VDC
